

LEARN CSS: SELECTORS AND VISUAL RULES

Olivia Woodruff Portfolio

In this project, you'll use your knowledge of CSS visual rules to create rule sets and improve the appearance of a photography portfolio site!

1.

Look over **index.html** to review the different HTML elements you have to work with, then navigate to **style.css**.

Start by making the header section stand out a bit more. Select the `.header` element, and make its background color `CornflowerBlue` by using the `background-color` property.

2.

Now change how the text is aligned in the top `.header` section.

In your `.header` rule set, align the text in the center using the `text-align` property.

3.

Next, use CSS to make the paragraph below Olivia's name have a larger text size.

In **style.css**, select the `.about-me` element, and set its `font-size` property to `20px`.

4.

The `.about-me` paragraph looks a little dark against the light blue background, maybe it would look nice if it blended more with the background.

Within the `.about-me` selector, use the `opacity` property to make it 50% transparent.

5.

In the Projects section, make the section titles bold.

Select the `.title` elements, and add a `font-weight` property to make their text bold.

6.

Change the main title color so that it matches the background color more nicely. Set the `color` for `h1` elements to `Azure`.

7.

Instead of the page being in the default Times font, change the font of the entire page.

Select the `body` element and make the `font-family` of the page `Georgia`.

8.

Finally, let's make the background of the page more interesting.

Within the `body` selector, set the `background-image` property to this URL:

```
https://s3.amazonaws.com/codecademy-content/courses/learn-css-selectors-visual-rules/hypnotize_bg.png
```

9.

Great work! Feel free to keep coding and edit the visual rules to personalize the site's appearance!
